

Chula Vista Elementary School District Healthy Weight Surveillance, 2014

Weight Status Based on BMI for Age

Christina Khaokham, RN, MSN/MPH
Epidemiologist
Chula Vista Elementary School District

**Weight Status Based on BMI for Age
Chula Vista Elementary School District, 2014**

Objective

To assess heights, weights, and calculate body mass index-percentile for age of Chula Vista Elementary School Children during 2014.

Methods

Trained staff collected anthropometric data beginning October 20–December 5, 2014. Height and weight were used to create an age- and gender-specific body mass index (BMI).

Data were analyzed using SAS 9.4 statistical software and Centers for Disease Control and Prevention's Division of Nutrition, Physical Activity, and Obesity growth chart programs (available at: <http://www.cdc.gov/nccdphp/dnpao/growthcharts/resources/sas.htm>). Data from children with physiologic developmental delays were reviewed and excluded from analysis. An examination of measured heights and weights suggested that some observations were erroneous. The erroneous observations and biologically implausible measurements, as defined by CDC's BMI percentile-for-sex and age criteria, were excluded from analysis (1.4% of all measurements).

Children were classified according to BMI percentile for age and gender in accordance with the CDC standardized groups as follows: (1) normal weight (BMI less than 85th percentile), (2) at risk for overweight (BMI 85th percentile or higher but less than 95th percentile), and (3) obese (BMI 95th percentile or higher). BMI categories are mutually exclusive.

Results

24,962 students were measured. Of those measured, a sample of 24,632 (99%) observations was used for the BMI calculations.

Weight Status Based on BMI for Age
Chula Vista Elementary School District, 2014

Table: Demographic characteristics of surveyed CVESD students, 2014 (n=24,632)

Characteristic	Frequency	Percent
Gender		
Male	12,555	51.0%
Female	12,077	49.0%
Race/Ethnicity*		
American Indian or Alaska Native	38	0.2%
